or fifty-one volumes, one for each of the States and District of Columbia, are required in order to obtain these data.

Successful completion of this project has required cooperation between the AMA and the Bureau of Health Manpower of the Department of Health, Education and Welfare (DHEW). The *AMA Physician File* is the data source and considerable resources have been utilized by the AMA in developing the computer programs and designing the volumes. Contract 232-78-0163 with the Health Resources Administration of DHEW has provided the financial support to print and disseminate these volumes. In addition to the bound volumes, print tapes of the information contained in this report are available from the Bureau of Health Manpower. Howard V. Stambler, Chief of the Division of Manpower Analysis of the Bureau of Health Manpower is the Contract Project Officer. Views or conclusions contained in this study should not be interpreted as representing the official position or policy of the Department of Health, Education and Welfare.

Characteristics of Physicians was conceived by AMA and was partially in response to passage of the National Health Planning and Resources Development Act of 1968 (P.L. #93-641). With passage of this legislation it became apparent that planning and regulation were to become integral components of the health care system in the United States.

The distribution of physicians also has been the object of Federal legislative action for several decades. In 1965, four separate pieces of legislation each attempted to effect a different distribution of health manpower resources have been enacted by the Federal Government. The most recent of these is the Health Pro-

portion. Assessment of specialty and location distributions, determination of physician shortages, and planning to ensure that health care needs are met require detailed data on relevant characteristics of the physician population. Data in the COP Series are available with the expressed hope that they will be coupled with intelligent analysis and careful population.

Use of these data, however, will not be restricted to policy makers. In addition, individual physicians will utilize *Characteristics of Physicians* for making specialty and migration decisions, and medical societies will consult *Characteristics of Physicians* to ascertain types of continuing medical education programs that will be of interest to a large proportion of physicians in the region. Researchers in health care and in the social sciences have also repeatedly expressed a need for this type of data provided. Therefore, *Characteristics of Physicians* is being widely distributed in an attempt to meet the repeatedly expressed needs of many groups.

The efficacy of the market as an allocative and distributive mechanism for health care resources is gaining supporters. It will be some time, however, before the desired incentives can be reintroduced into the health care market. Until that time, the CHSRD is attempting to ensure that all decisions relating to health personnel are based on the best data available and, thus, introduce as few distortions as possible.

Bureau of Health Manpower, Department of
Education, and Welfare, and Project Officer, ef-
forts to make publication and distribution
volumes possible. Special appreciation goes
Kramer, Contract Liaison, for her work in coordi-
publication and dissemination activities for the

purposes. Thus, the series provides the only reliable data base on physicians across all areas and be of significant use to practitioners and researchers in the health care industry.

Data presented here are for the physician population practicing in the United States. Detailed characteristics are presented for all physicians with known address in a geographic region who are professionally active. In addition, counts of physicians who are inactive are not classified are provided on each table. November 31, 1975 was selected as the point in time of report for the following reasons;

P.L. #93-641 was signed in January, 1975, and it was only during 1976 that significant activity was undertaken in response to this legislation. Thus, 1975 represents the last year in which the health care system was not affected by this major piece of legislation and, therefore, is the most appropriate base year for future analyses of the impact of this legislation.

Because this represents the first statistical series of its scope, an exceptional amount of time had to be expended in the conceptualization of the project, preparation of data set, and writing of the necessary computer programs. However, plans are being developed for publication of these volumes on a more regular and current basis in the future.

Introductory material which follows provides definitions and discussions of the geographic aggregation and the specific physician characteristics tabulated. The publication's relationship to other AMA publications and to other data sources is detailed. In addition, the *American Medical Association Physician Masterfile* is described; a list of the health service areas covered in the volume is given; and a sample of the questionnaire sent to physicians for the purpose of updating the *AMA Physician Masterfile* is included. Twenty-one tables are listed in the Table of Contents—six national tables which are repeated in all 51 volumes, and 15 specific tables providing: state, HSA, county, and county data—follow immediately. An additional table which provides medical school data is included for states having medical schools.

physicians separately. In some geographic regions, the inclusion of Federal physicians in the tables would provide an upward bias to the real supply of physicians and services available to the general population.

Geographical Units of Aggregation

Each volume of COP represents data for the United States as a whole; for the particular state; and for county groups, health service areas, and counties within the state. Each physician is allocated to a particular geographic location on the basis of his/her professional mailing address as recorded in the *AMA Physician Masterfile*.

The geographical subdivisions within the state are given in additional explanations. These follow immediately below.

County Group

The county group tables (Tables 13-15) are based on the Demographic County Classification based on the Marketing Management, Inc.'s population and Standard Metropolitan Statistical Areas (SMSA) definitions. The SMSA's serving as the basis for the county group size groups 6 through 9 are based on the metropolitan area concept established by the United States Economic Development Budget.¹ An SMSA consists of the following: 1) a central city of 50,000 or more inhabitants; 2) the remainder of the county in which the central city is located; and 3) contiguous counties that are integrated economically and socially with the county containing the central city. The group 5 county classification includes "Potential SMSA's" as defined by the Marketing Management, Inc. and are considered potential candidates for SMSA status. The county classification groups 1 through 4 include counties in nonmetropolitan areas. Table A below summarizes the 9 demographic county classifications.

The independent cities of St. Louis, Missouri; Baltimore, Maryland; Alexandria, Virginia; Henric, Virginia; and Chesapeake, Virginia are treated as individual counties and assigned to the appropriate county group on the basis of the city's population.

¹Sales & Marketing Management, Inc. and the Bureau of Economic Analysis use identical SMSA definitions except for a few instances in England where the former uses the county unit rather than township as the geographic boundary. SMSA's are defined

7	Counties in SMSA's with 500,000 to 999,999 inhabitants	37	128	26,7
6	Counties in SMSA's with 50,000 to 499,999 inhabitants	184	330	40,5
5	Counties considered potential SMSA's	41	51	4,2
4	Non-Metropolitan counties with over 50,000 inhabitants		229	17,0
3	Non-Metropolitan counties with 25,000 to 49,999 inhabitants		484	16,7
2	Non-Metropolitan counties with 10,000 to 24,999 inhabitants		907	14,8
1	Non-Metropolitan counties with under 9,999 inhabitants		769	4,5

Cities defined as independent are included in "number of counties" column.

Source: Louis J. Goodman, *Physician Distribution and Medical Licensure in the U.S., 1976* (Chicago: American Medical Association, 1977), p. 32.

independent cities, largely those in Virginia, are incorporated into the county which encompasses it. For instance, Princess Anne County in Virginia is referred to as Virginia Beach city. In addition, Kalawao County in Hawaii is combined with Maui County and Alaska is divided into four judicial divisions with assignment into appropriate county group based on the population of each judicial division.

Health Service Area

The National Health Planning and Resources Development Act of 1974 mandated the division of the country into health service areas. One section of this publication, Tables 16-18, presents data on Non-Federal health service areas located entirely or partially within the state covered in this volume. States with more than one health service area within their boundaries have tables for each health service area. In states where the entire state is designated a health service area, there is, of course, only one health service area table. The existing *Masterfile* data were converted into the health service area classifications based upon the listing of health service areas published in the September 2, 1976, *Federal Register* and incorporate revisions by the Department of Health, Education, and Welfare through July 1, 1976. In most states, HSA's

consist of an aggregation of counties. In some instances, however, (Alaska; Connecticut; Massachusetts; the City of Chicago; and the Navajo, Hopi, White Mountain, San Carlos, and Papago Indian Reservations) the health service areas were not composites of counties, but rather politico-legal boundaries. The exact political units for each HSA are listed in Exhibit A.

County

Selected characteristics of physicians by county for each specific state are listed in Tables 19-21. If no physicians are located in a county, that county is not listed in the tables. For some states, noncounty geographic areas are treated as counties where the geographic subdivisions used differ. This usage parallels the usage in the group tables. The independent cities of St. Louis, Missouri; Baltimore, Maryland; Alexandria, Virginia; Hampton, Virginia; and Chesapeake, Virginia are treated as individual counties. All other independent cities, largely those in Virginia, are incorporated into the county which encompasses it. Princess Anne County in Virginia is referred to as Virginia Beach city. Kalawao County in Hawaii is combined with Maui County. The four judicial divisions of Alaska are treated as counties.

Physician Characteristics

distributions of physicians are described in this in terms of a number of professional characteristics with some individual characteristics crossed with others. Key characteristics include specialty, major professional activity, age, sex, board certification, Federal or Non-Federal employment, and county of graduation. The thirty-six specialty classifications used in this publication are the same as used in other AMA publications such as the *Physician Distribution and Medical Licensure in the U.S.*, and are presented in Table B. A physician's specialty classification is defined as that in which he/she is spending the largest number of practice hours. The county of county tables utilize the classification of primary care/non-primary care specialists. Primary care physicians, for the purposes of these tables, are physicians whose specialty is general practice, internal medicine, pediatrics, and obstetrics/gynecology. Another area of general interest is specialty board certification. Certification indicates that the physician has satisfactorily completed an examination in an area of specialization and has taken all

of the specific training requirements for certification of a specialty board.² The licensed physician is to practice any specialty regardless of whether the physician is board certified or not. Tables in this publication indicate board certification in some specialties, but not necessarily the specialty in which the physician is classified. However, over 90 percent of the physicians reported as board certified are certified in the specialty in which he/she is classified.³

Physicians' professional activity by specialty is used to assess the availability of patient care. Therefore, professional activity is reported by patient care subgroups of patient care on the basis of "office

² "The boards are in no sense educational institutions, and a certificate of a board is not to be considered a degree. It does not confer on any person legal qualifications, privileges, nor a license to practice medicine or a specialty. The boards do not in any way interfere with or limit the professional activities of a licensed physician, nor do they desire to interfere in the regular or legitimate duties of a practitioner of medicine." Liaison Committee on Graduate Medical Education, *Directory of Accredited Residencies, 1977-78*. (American Medical Association, 1978), p. 367.

to 75, and 75 and over; federal employment as well as employment by the Veterans Administration, Army Services, the U.S. Public Health Service, and Federal Service.

medical education background of physicians is listed in several forms. Physicians who graduated United States medical schools are categorized by pool of graduation and the state in which they currently are practicing medicine. In addition, physicians listed in a particular county group or county within a state are cross-categorized either as having graduated from a medical school in the state, in a contiguous state, in another state, in Canada, or outside the United States and Canada.

RELATIONSHIP TO OTHER AMERICAN MEDICAL ASSOCIATION PUBLICATIONS AND TO THE COOPERATIVE HEALTH STATISTICS SYSTEM (CHSS)

Through previous AMA publications, *Physician Distribution and Medical Licensure in the U.S.*, and *Medical School Alumni*, have reported similar information. *Characteristics of Physicians* provides more detail information than previously available in published

publications. This publication has two key features: greater detail of physicians' characteristics and greater detail with respect to geographic units. More detail is provided for distributions, sex, and specialty board certification for states, county groups, individual counties, and for the health service areas. Thus, this publication meets a more extensive set of data needs not met by other AMA publication series.

This data collection effort to provide information comparable to the data published in *Characteristics of Physicians* is being undertaken by the Cooperative Health Statistics System (CHSS). Although this system eventually is to collect data on a state-by-state basis for health-related occupations, reports published as part of CHSS have not contained the level of detail

in their interpretation. A few explanatory notes are necessary about the treatment of the professional classifications used in these tabulations.

As mentioned previously, it was felt that data on seasonally active physicians would be most useful for research and planning purposes. At the same time, however, it was felt that the total pool of physicians manpower should be represented in these volume tables. A dual purpose caused some problem in the design of certain tables because of the inactive and not classified activity categories. These two categories are included in the tabulations but are treated differently depending on the type of cross-tabulation involved. General tables in which specialty is cross-tabulated with professional activity, the inactive and not classified physicians are included in the total value but are not distributed by specialty. Instead, these two values are provided at the bottom of the specialty column under "Inactive," "Non-classified," and "Unknown." To arrive at the total value, the inactive and not classified values should be added to the total of the other major professional activity categories. This applies to Tables 1, 3, 6, 9, 16, and 19.

Address Unknown

Physicians with unknown addresses are included in Table 1 for informational purposes. Again, this is not distributed throughout the table but is included in the grand total. Physicians with unknown addresses are excluded from all other national tables; therefore, the grand total value on Table 1 exceeds the total value on Table 2 plus the total in Table 3, and the total in Table 4.

Availability of Data

This concludes the description of data content of the COP series. Every effort has been made to provide the most frequently requested information in a form meaningful to most users. These data are also made available in the form of print tapes for the Bureau of Health Manpower. In addition, plans are underway to publish the COP series on a regular

* These observations are based on a comparison of the *Health Annual* for Massachusetts and the *Characteristics of Physicians in Massachusetts*.

is without a unified approach and without access to what these decisions would mean in terms of statistical methods and interpretation of the data.

Research activities within the Association became sophisticated, the complexity of data requirements increased. The *Masterfile* was, therefore, expanded and modified to meet these requirements. Today, the *AMA Physician Masterfile* is the most comprehensive and authoritative source of physician data in the United States. It contains information on every physician in the country—members and non-members of the Association, on graduates of American medical schools who are temporarily practicing overseas, and graduates of foreign medical schools who are in the United States and meet the education standards for primary recognition as physicians. Thus, all physicians comprising the total U.S. manpower pool are included on the *AMA Physician Masterfile*.⁹

Information is started on each individual upon entry into medical school or, in the case of foreign and Canadian physicians, upon entry into the U.S. As a physician's career and career develops, additional information is added to the file—e.g., internship and residency training, licensure board certification, professional affiliations, and other characteristics. Although such characteristics change over time, they are not subject to constant change. These types of characteristics are included in the "historical" portion of the *Masterfile*. In addition, there is the "current professional activities" portion of each physician's record that identifies his or her address, professional activity, specialties, and employment status. By definition, this current portion of the *Masterfile* is subject to constant change and must be updated through intense monitoring techniques.

Up to 1966, physician classification by specialty, subspecialty, and employment was made through the implementation of Professional Activities (CPA) system, which was based upon a "private practice/not in private practice" concept. Data were collected under this system via a short postcard-type questionnaire en-

abled to be filled out by the physician or a designated person. This manpower cannot be properly allocated among different activities.

This recommendation gained extensive consideration in 1966 when the then AMA Department of Research, which has been replaced by the Department of Statistical Analysis and is now a part of the Center for Health Services Research and Development, began its efforts to update, improve, and expand the *AMA Physician Masterfile*. In its evaluation of the current base, it identified four major limitations in the current classification system:

1. Existence of categories which were not mutually exclusive, resulting in confusion and duplication between and within activity, specialty, and employer categories.
2. Lack of a criterion upon which to base classification.
3. Lack of information on the most recent activity for each individual record.
4. Unavailability of information on response for the annual verification questionnaire.

These deficiencies were of sufficient concern to warrant major revisions in both the structure of the file and the data collection procedures. Therefore, a four-year project (the Reclassification of Physicians Project) was initiated to redesign the classification system. The AMA undertook the Reclassification Project in cooperation with the National Center for Health Statistics, the United States Public Health Service, the Bureau of Census, and the Demographic Surveys of the U.S. Bureau of the Census and knowledgeable researchers in academia.

The first step in reclassification was the restructuring of the format of the 1966 edition of the *Distribution of Physicians, Hospitals, and Hospital Beds*, a publication of the AMA Center for Health Services Research and Development. Through a series of computer programs, the old *Masterfile* category "private practice/not in private practice" was converted to the more functional "patient care/other professional activity." Within the 1966 format changes constituted a step in the right direction, an important deficiency in the publication of the file of the physician population remained: data were not being collected under the old classification method. It became obvious that the data collection procedure had to be revised to correlate with the new classification

⁹Information draws heavily from: Goodman, L.J. *Physician Distribution and Medical Licensure in the U.S., 1976*. Chicago: American Medical Association, 1977.

¹⁰For a discussion of validation studies conducted on the *AMA Physician Masterfile*, see Goodman, L.J., and Eisenberg, B.S., "The Accuracy of Physician Data." *Public Data Use*, 5 (May 1977): pp. 1-10.

the activity and employer categories were determined. After five mailings a usable response of 87.4 percent was attained.

Returned questionnaires were passed through a series of clerical editing procedures and a quality control program. They were then keypunched and the data were processed through a series of computer programs which identified the activity, specialty, and employment classification for each physician record.

A complete census was scheduled to be conducted every three years. However, in order to verify the information gathered in 1968 under the new system, a comparison census of 325,000 physicians was made again in 1973. The 1973 questionnaire, structurally the same as that of 1968, contained the physician's 1968 response with a space provided for corrections or changes. A usable response rate of 86.8 percent was attained. Analysis of two sets of data revealed that the data collected in 1968 were consistent with that of 1973, therefore, concluding that the questionnaire used to gather the data was a reliable survey instrument. The most recent comparison census, for the purpose of this project, was conducted in 1973. The 1973 questionnaire is identical to that of 1968 except for the addition of a section regarding address and other general information. The response rate was consistent at 86.8 percent. A copy of the questionnaire used in the 1973 census is included in Exhibit B.

Between census years, a comprehensive computerized updating system keeps the *Masterfile* current. Each physician's record is dated to reflect the most recent change, which may be obtained for AMA mailings, company mailings, physician correspondence, or hospitals, government agencies, medical societies, medical agencies, medical societies, specialty societies, and licensing agencies. Any indication of a change in professional status or address triggers a questionnaire similar to the one used in the 1973 census. The questionnaire is placed on a "change" file while follow-up attempts are made to raise the response rate. In 1975, approximately 3,500 weekly change questionnaires were processed per week.

In an additional check on the *Masterfile* between censuses, the AMA's Center for Health Services Research and Development conducts year-end computer comparisons. A comparison of 1972 and 1973 year-end data revealed the same consistency as the complete census data of 1968 and 1969. A similar comparison was conducted

- *Medical Schools*—Provides data on schools of medicine, year of graduation, birthplace, birthdate, and professional appointments.
- *State Licensing Boards*—Provides licensure information of physicians.
- *Hospitals*—Provides information on internists, residents, birthplace, and foreign medical graduates in training.
- *Department of Defense*—Provides data on physicians in government service.
- *American Specialty Boards*—Provides board certification of physicians.
- *Medical Societies*—Provides data on members in specialty, state, and county societies.
- *Educational Council for Foreign Graduates*—Provides data on foreign medical graduates.

While many sources provide data for inclusion in the *Masterfile*, data are also often extracted from the *Masterfile* for use by these agencies. In addition, the *Masterfile* is used by the National Center for Health Statistics; the Office of Emergency Preparedness; the Office of the President of the U.S.; the Office of the Secretary of DHEW; the National Institutes of Health; various other federal, state, and local government agencies; numerous universities and medical schools; county, and specialty medical societies; the pharmaceutical industry; and ten addressing companies.

EXHIBIT A:

HEALTH SERVICE AREA DESIGNATION JULY 1, 1976

The National Health Planning and Resources Development Act of 1974 (PL #93-641) mandates that health service areas be established throughout the United States. The legislation specified that each health service area meet the following requirements:

1. The area must be a rational geographic region containing a comprehensive range of health services, and of a character suitable for the planning and development of health services.

¹Committee on Interstate and Foreign Commerce, National Health Planning and Resources Development Act of 1974.

etermines, with the approval of the Secretary, at the area meets the other requirements of this subsection. "Unusual" and "highly unusual" circumstances are to be defined by the Secretary in regulations.

to the maximum extent feasible, the boundaries of the health service area must be coordinated with the boundaries of Professional Standards Review organizations, existing regional planning areas, and State planning and administrative areas.

Each standard metropolitan statistical area (MSA) must be entirely contained within the boundaries of one health service area unless the Governor of each State in which a SMSA is located determines, with the approval of the Secretary, that a health service area should contain only part of the SMSA in order to meet the other requirements of this subsection.

1975 Health Service Areas designated in July 1976 * definitions used in this publication. A listing of the counties, towns, or cities comprising the state treated in this volume follows below.

AMERICAN MEDICAL ASSOCIATION

535 N. Dearborn Street

Chicago, Illinois 60610

Dear Doctor:

Please complete this questionnaire as soon as possible so that your official record is up-to-date with correct and current information for printing of the *1973 AMA DIRECTORY*. Data obtained from this questionnaire will be aggregated and used to describe the distribution of physicians and to analyze health manpower. However, *NO information from your record will be released* to any organization for the purpose of developing independent physician data files.

Thank you.

Instructions

1. Please answer every question on the basis of your current activities.
2. *Indicate any changes.* Information which you provided previously has been printed in this form. Please complete unanswered sections and make discrete changes where applicable.
3. Upon completion, return the questionnaire at your earliest possible convenience, using the preaddressed envelope.

Contents

The questionnaire is divided into four sections:

- I. Professional Activities—the types of activities in which each physician spends the most time during an average week.
- II. Specialization—the time physicians spend in their major fields of specialization.
- III. Present Employment Status—the number of hours per average week spent under various practice arrangements, by type of practice organization or employer.
- IV. Address and General Information

Exclude time spent in training, teaching, or research. Include travel time end time spent on record keeping and other office work connected with your patients.

HRS. 4 HRS.

3. How many hours per week do you spend on ADMINISTRATIVE ACTIVITIES, AS A SALARIED STAFF MEMBER OR EXECUTIVE OF AN ORGANIZATION?

Exclude time spent on record keeping and office work connected with management of your own practice. Include activities connected with the administration or staff committees of a hospital or other health facility or agency, clinic or group, or any other organization by which you may be salaried as an executive or staff member.

HRS. 5 HRS.

4. How many hours per week do you spend on MEDICAL TEACHING?

Include hours spent in teaching as well as in preparation for subjects taught in medical schools, nursing schools, other hospital schools, hospitals, colleges, universities, or any other educational institutions.

HRS. 6 HRS.

- a. OF THESE HOURS how many do you spend on direct care of patients?

Exclude time devoted to patient care by house staff under your supervision.
In view of possible overlap of hours spent in teaching and research, please do not double-count such hours, but report them instead in the most applicable category.

HRS. 7 HRS.

5. How many hours per week do you spend on MEDICAL RESEARCH?

All phases of investigating medical problems regardless of source of funds for such research.

- a. OF THESE HOURS how many do you spend on direct care of patients?

Exclude time devoted to patient care by house staff under your supervision.

HRS. 8 HRS.

HRS. 9 HRS.

6. How many hours per week do you spend on any OTHER medical activities (not listed above) INVOLVING DIRECT CARE of patients?

HRS. 10 HRS.

7. How many hours per week do you spend on any OTHER medical activities (not listed above) NOT INVOLVING direct care of patients?

HRS. 11 HRS.

8. About how many hours per week do you spend in ALL PROFESSIONAL ACTIVITIES? Total of questions 1 through 7 (exclude 4a and 5a)

HRS. 12 HRS.

If you indicated "zero" on question 8, or if none of the above categories apply to you, please answer question 9.

9. Are you: 1 ☐ RETIRED 2 ☐ SEMI-RETIRED
3 ☐ PERMANENTLY DISABLED
4 ☐ TEMPORARILY not in practice
5 ☐ Not active for other reasons (please describe) _____

*Total of Section I,
equivalent to total of
Section II, and total of
Section III, respectively.*

Please cross out any prior information which is not applicable.

III. PRESENT EMPLOYMENT STATUS

Please indicate the current *number of hours spent per week* for the following types of employers. (Note: employer should **NOT** be confused with the physical location of where your hours are spent.) Please answer EVERY question 1-10. If you do not spend any hours for any one of the following employers, so indicate by entering zero (0) hours.

	HOURS PER WEEK	
	Prior Census	Changes If Any
1. Self: "solo" practice	1	_____
2. Self: partnership practice	2	_____
3. Arrangement with other physician(s): non-group	3	_____
4. Group practice	4	_____
5. MEDICAL SCHOOL (or parent university)	5	_____
6. NON-GOVERNMENTAL hospital	6	_____
7. City or county government a. HOSPITAL	7	_____
b. OTHER than hospital.	8	_____
8. State government a. HOSPITAL	9	_____
b. OTHER than hospital.	10	_____
9. U.S. government a. HOSPITAL	11	_____
b. OTHER than hospital.	12	_____
<p style="text-align: center;">↓</p> <p>Indicate Federal Agency:</p> <div style="display: flex; justify-content: space-between;"> <div> <p>1 <input type="checkbox"/> Army</p> <p>2 <input type="checkbox"/> Navy</p> <p>3 <input type="checkbox"/> Air Force</p> </div> <div> <p>4 <input type="checkbox"/> Public Health Service (C.C. & C.S.)</p> <p>5 <input type="checkbox"/> Veterans' Administration</p> <p>6 <input type="checkbox"/> Other _____ (SPECIFY)</p> </div> </div>		
10. OTHER ORGANIZATION—Not listed above (all types of insurance carriers, pharmaceutical companies, corporations, voluntary organizations, medical societies, associations, grants, foreign countries, etc.)	14	_____

If the address printed at right is NOT correct, please make appropriate changes in space provided.

(STREET)

44-75

(CITY, STATE, ZIP)

2. Please indicate at which address you wish to receive *medically related* material:

Professional Address..... ☐ 13

Home Address..... ☐ 14

3. Please indicate below the county and state of your HIGH SCHOOL graduation if in the United States or Possessions.

(County) 15-17

(State) 18-19

20-21

If already provided, please verify following:

(County)

(State)

GROUP NAME

ADDRESS

CITY-STATE-ZIP

4. Please supply the following information:

Social Security No.: _____ 22-32

Age: _____ 33-35

Sex: ☐ 36 Male ☐ 37 Female

Race: ☐ 38 White ☐ 39 Black ☐ 40-41 Other
